## PEJSEHUL / FIREPLACEHOLE

Pejsehullet skal være konstrueret i brandhæmmende materiale i forhold til DS/EN 13501-2. Biopejsvæggen skal være med en BS-konstruktion. Materialet skal overholde minimum A2-s1, d0.

Pejsehullet skal være hermetisk lukket i både top og sider, således at der ikke opstår falsk gennemtræk. Dette gælder også ledningsudtaget, hvor der enten fuges omkring ledningen eller tilslukkes med brandhæmmende skum.

Decoflame anbefaler, at man **IKKE** fuger omkring pejsens casing. Den 5mm skyggekant sikrer, at pejsen både kan ventilere og isolere, således en varmemigration i væggen minimeres. Derudover kan fugen på sigt risikere at krakelere og/eller misfarves.

### IKKE GODKENDT / NOT APPROVED (1-4)

Hullet til brænderen er beklædt med træ / The hole for the burner is lined with wood.

For stort et hul omkring ledningshullet, skulle have været fuget / Too much space around the wiring, must be grouted.

Pejsevæggen er ikke sikret mod falsk træk i siderne / The fireplace wall is not secured against false draft in the sides.

Væggen er ikke hermetisk lukket forneden, der kan komme træk / The wall is not hermetically sealed at the bottom, which can cause drafts.

### GODKENDT / APPROVED (5-8)

Pejsevæg lukket i top og sider / The fireplace wall closed at the top and sides.

Strømskik 3-benet (Jord) / Power plug 3-pin (Ground).

Alle krydsmaal skal være i vinkel / All cross-measures must be at an angle.

De 2 vægge skal være i vatter / The 2 wall must be in level.

## VIGTIGT / IMPORTANT

Hulmuren nedadtil (til gulv) må max. være 1000mm i dyben - minimum 400mm.

The cavity wall downwards (to the floor) must max. be 1000mm in depth - minimum 400mm.

DK - Generelle vejledninger for “decoflame® biopejse lavet efter mål:

Der er luft imellem vægflader og pejseflader. Dette er for at sikre tilstrækkeligt luftstrøm og køling af pejsen. Derudover er det vigtigt at opretholde 5mm luft rundt om pejsenindsatsen. Fordelene er følgende:

- Nedsat varmegrandring i væggen.
- Korrekt nedkøling, ventilation og isolering af pejsen.
- Forøget levetid på pejsen, grundet mindre risiko for overophedning.
- Pænere finish end ved fugning grundet varmepåvirkning (krakelering og misfarvning af fuger).
- Optimale og rolige flammer.

Hulmur (udskæring) = pejsen dimensioner + 10mm. Denne åbning må ikke forsegles el. fuges. Da hjørnerne af hulumuren forbliver synlige, er det vigtigt, at finishen er retvinklet og skarpkantet (af højeste kvalitet). Alle 4 hjørner skal være præcist 90°.

**Vægge**  
Overflader inde i hulmur skal udføres i **ikke** brandbart materiale.

**Sten /mursten**  
Hulmur (udskæring) laves iht. medfølgende tegning: 44814, 44815, 44816 og 44817.

**Vigtigt**  
Hulrum for pejsen skal være hermetisk lukket, således der ikke dannes falsk luft eller cirkulation, da det vil forringe ildens flow og pejsens levetid.

**DK - Eksploderet view viser installationsproces.**  
1. Pejsens indsats skal placeres og centrereres i hulmur. Brug egnet plugs og skruer afhængig af vægtypen.  
2. Pejsen tilsluttes via stikkontakt (220V 50-60Hz m/jord) og nedsænkes forsigtigt i reces.  
3. Slutteligt monteres glassene i glasholderne.

UK - General Guidelines for “decoflame® made-to-measure fireplaces”:

There is air between surfaces of the wall and fireplace. This to ensure sufficient air flow and cooling of the fireplace. Furthermore, it is essential to maintain a 5mm gap around the fireplace. The advantages are the following:

- Reduced heat transfer in the wall.
- Correct cooling, ventilation and insulation of the fireplace.
- Increased lifespan of the fireplace, due to less risk of overheating.
- Nicer finish than with grouting due to the effect of heat (cracking and discolouration of the grout).
- Optimal and quiet flames.

Wall (cut-out) = the fireplace dimentions + 10mm. This gap may not be sealed or grouted. As the edges of the cut-out remain visible it is important that they are made of the highest possible finish. All four corners of the cut-out must be exactly with an angle of 90 degrees.

**Walls**  
All surfaces inside the wall cut-out are to be covered with **non** combustibile material.

**Stone / Brick walls**  
The cut-out is made according to drawings about brick walls: 44814, 44815, 44816 og 44817.

**Important**  
Make sure to create a closed cavity. Cavity may not be able to create a false air circulation, as it will impact the flow of the fire.

**UK - Exploded view showing the installation process.**  
1. The casing of the fireplace is centered in the wall cut-out. Use suited wall plugs depending on the type of wall.  
2. The fireplace is plugged in the power outlet (220V 50-60Hz w/ground) and lowered into the recess.  
3. Gently place the glass on the base plate pins.
