

# Montreal Clear

The fireplace that joins the outdoor and indoor environment

Montreal CLEAR™ is the newest product from Decoflame. An innovative product created for the interior- and style-conscious homeowner who focuses on exclusive elements when designing and decorating.

Montreal CLEAR™ is a built-in fireplace for the exterior wall, made to bring the indoor out and the outdoor in. Connect the two environments and let them merge together.

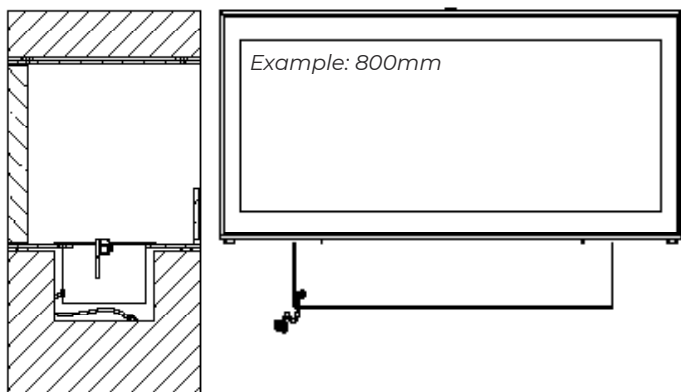

### Special colors for the outer frame:

The outer frame for the bio fireplace can be ordered in different RAL-colours if inquired, ensuring that the colour of the frame matches the colour of the windows and door frames of the house in the best possible way.

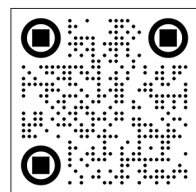

Please contact us for an offer on colours besides from the standard colours listed below:

- RAL-9010
- RAL-9005
- Anodized aluminium

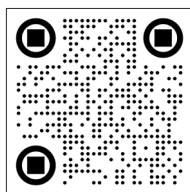

### Size example and cut from the side of the bio fireplace

Montreal Clear with  
Denver F6 burner

New:  
Hybrid Mist

### 1. Electronic Denver F6 for bioethanol

Can be controlled via control panel and/or app. A biofireplace with a closed system that is user-friendly to operate in everyday life.

### 2. Electronic Hybrid Mist for demineralized water

Can be controlled via control panel and/or app. A model that produces steam that is illuminated by LED lights and gives the illusion of flames. Simple model to operate in everyday life. This model does not provide heat.

### 3. Manual burner for bioethanol

The manual burner can be infinitely adjusted and is a simpler burner that needs to be filled from time to time and turned off manually with a push button.

For all models there is no need for chimney channels or pipe installations.

### Options:

The biofireplace is supplied with double windows on the outside and tempered glass behind the double window. Inside there is a low glass. The standard colour of the biofireplace's cabinet is black.

The fireplace can be ordered in the desired length and depth, so that it can be adapted to unique projects.

### Paying attention to minimum measurements:

Minimum depth and length electronically:

300mm / 700mm

Minimum depth and length manual:

250mm / 600mm

### Thermo friendly:

Besides that bioethanol fireplaces are more environmental friendly than other combustion types, Montreal CLEAR is also approved by the, high, Danish energy requirements. This mean that Montreal CLEAR does not emit a heat loss neither on out-going heat nor in-going cold.

According to rules regarding biofireplaces, please consult local regulations and laws and adhere to those.
